SUB TOPIC: SOLVING PROBLEMS USING VENN DIAGRAMS

1. Given that n(A) = 30, n(B) = 25 and n(AUB) = 45.

(a) Draw a venn diagram to show the above information.

(b) Find n(A∩B)

Let the number in (A∩B) be r.

$30 + 25 + r - r - r = 45$

$55 - r = 45$

$55 - 55 - r = 45 - 55$

$-r = -10$

$\frac{-r}{-1} = \frac{-10}{-1}$

$r = 10$

(ii) n(A only)

$n(A\ only) = 30 - r$

$= 30 - 10$

$= 20$

(c).If a member is picked at random, find the probability of selecting a member in $(A \cap B)^{I}$

$n(A \cap B)^{I} = (30 - r) + (25 - r)$

$= (30 - 10) + (25 - 10)$

$= 20 + 15$

$= 35$

$n(E) = 35$

$y = 28$

OR

$y + 20 - 13 = 35$

$y + 7 = 35$

$y + 7 - 7 = 35 - 7$

$y = 28$

OR

$y - 13 + 20 = 35$

$y + 7 = 35$

$y + 7 - 7 = 35 - 7$

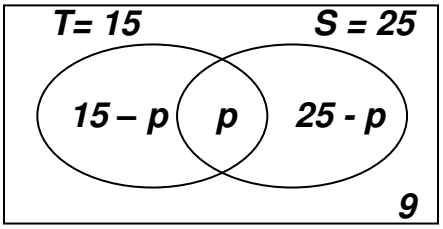

$y = 28$

∴ 28 Pupils like mathematics

$49 - p = 40$

$49 - 49 - p = 40 - 49$

$-p = -9$

$\frac{-p}{-1} = \frac{-9}{-1}$

$p = 9$

(ii) (137 x 42) – (37 x 42)

(137 x 42) – (37 x 42)
= (42 x 137) – (42 x 37)
= 42 x (137 – 37)
= 42 x 100

Mathematics is the Key

Workout the following;

1. $(2 \times 17) + (2 \times 13)$
2. $(75 \times 29) - (75 \times 19)$
3. $(129 \times 37) - (129 \times 27)$
4. $(290 \div 70) - (10 \div 70)$
5. $(179 \div 13) - (10 \div 13)$

ASSOCIATIVE PROPERTY

Example

The alteration of the position of the brackets does not change the result.

Use the associative property to workout

(5+8)+2 = 5+(8+2) = (5+2)+8

13+2 = 5+10 = 7 +8

PATTERNS AND SEQUENCES

SUB TOPIC: DIVISIBILITY TESTS

Divisibility for 2.
A Number is divisible by 2 if the digit in the one's place is 0, 2, 4, 6, or 8 eg 1460

Test for 3:
A number is divisible by 3 if the sum of its digits is divisible by 3 eg 741 = 7 + 4 + 1 = 12

Test for 4:
A number is divisible by 4 if the number formed by its last two digits is divisible by 4. eg 572. The last two digits are 7 and 2 therefore the number formed is 72 which is divisible by 4. Hence 572 is divisible by 4.

Test for five (5):
A number is divisible by 5 if the last digit in the ones place is either 0 or 5. eg 360 or 805.

Activity

1. Write any two numbers divisible by 2
2. Which of the numbers is divisible by 3
   34 236 11190 2783
3. Which of the numbers is divisible by 4
   4612 139 8500 7869

Test for 6:
A number is divisible by 6 if it is divisible by 2 and 3. In other words a number is divisible by 6 if it is even and the sum of its digits is divisible by 3.

Example:
618 is divisible by 6 since it is an even number and the sum of its digits 6 + 1 + 8 = 15 is divisible by 3.

738 is divisible by 6 since it is an even number and the sum of its digits 7 + 3 + 8 = 18 is divisible by 3. Therefore 738 is divisible by 6.

Test for 7:
When the last digit of a number is doubled and the result is subtracted from the number formed by the remaining digits, the outcome is divisible by 7.

Example: Take the number 861. the last digit is 1 and the number formed by the remaining digits is 86, double 1 to give (1+1)= 2

Mathematics is the Key

Subtract 2 from 86 to give (86 – 2) = 84
84 is divisible by 7. Hence 861 is also divisible by 7.

Test for 8:
A number is divisible by 8 if the number formed by the last three digits is divisible by 8.
Example:
In the number 7960,760 is number formed by the last three digits. It is divisible by 8 therefore 7960 is divisible by 8.

Test for 9:
A numbers is divisible by 9 if the sum of its digits is divisible by 9.
Example: 198 the sum of 198 is 1+9+8 = 18
18 is divisible by 9 therefore 198 is divisible by 9.

Test for 10:
A number is divisible by 10 if the digit in the ones place is 0 eg 70, 60, 120, 3010.
A number which is divisible by 10 is also divisible by 2 and 5.

Test for 11:
A number is divisble by 11 if the difference between the sum of the digits in even places and the sum of the digits in the odd place is zero (0) or divisible by 11.

eg Even position: 7 3 3 6 8 9

Odd position
Sum of the numbers in odd positions = 7 + 3 + 8 = 18
Sum of the numbers in even positions = 3 + 6 + 9 = 18
Difference between sums =18 – 18 = 11
Since difference is divisible by 11
∴ the number 676390 is divisible by 11.

Activity

1. Which of the following numbers is divisible by 6
   456 1476 129
2. Circle the numbers divisible by10
   34 290 190 2789
3. Which of the following numbers is divisible 9

2. Mary bought a cake and she ate $\frac{1}{3}$ in the morning, $\frac{5}{12}$ in the afternoon and the rest in the evening. What fraction of the cake did she eat in the evening.

$$1 - \left(\frac{1}{3} + \frac{5}{12}\right)$$
$$1 - \left[\left(\frac{1}{3} \times \frac{4}{4}\right) + \frac{5}{12}\right]$$

3. If $\frac{2}{3}$ of a number is 40. What is the number?

Let the number be m

$$\frac{2}{3} of\ m = 40$$
$$\frac{2}{3} \times m = 40$$
$$\frac{2m}{3} = 40$$
$$3 \times \frac{2m}{3} = 40 \times 3$$

SUB TOPIC: APPLICATION OF FRACTIONS(of the remainder)

Examples:

1. Twaha spent $^{1}/_{3}$ of his money on books and $^{1}/_{6}$ of the remainder on transport.
   (i) What fraction of his money was left?

Fraction spent on books = $^{1}/_{3}$

Remaining fraction: $1 - \frac{1}{3} = \frac{3}{3} - \frac{1}{3} = \frac{2}{3}$

Fraction spent on transport: $\frac{1}{6}\ of\ \frac{2}{3} = \frac{1}{6} \times \frac{2}{3}$

$= \frac{1}{9}$

transport and books: $\frac{1}{3} + \frac{1}{9}$

$\frac{1}{3} \times \frac{3}{3} + \frac{1}{9} = \frac{3}{9} + \frac{1}{9} = \frac{4}{9}$

Remained fraction = $1 - \frac{4}{9} = \frac{9}{9} - \frac{4}{9} = \frac{5}{9}$

(ii) If he was left with shs 15,000= how much did he have at first?

Let the total be y.

$\frac{5}{9}\ of\ y = sh.15,000$

$\frac{5}{9} \times y = sh.15,000$

$\frac{5y}{9} = sh.15,000$

$\frac{9}{5} \times \frac{5y}{9} = sh.15000\ x\ \frac{9}{5}$

$y = sh.3000\ x\ 9$

$y = sh.27,000$

He had sh.27,000 at first

2. A father shared his land as follows, $\frac{1}{3}$ was given to the son, $\frac{1}{4}$ of the remaining land to the daughter and the rest was remained for the parents.

SUB TOPIC: CALCULATING TIME

Example:

1. In what time will shs 12,000 yield an interest of shs 1,800 at 5% per year.

   P x T x R = SI
   SI = 1800=
   P = 12,000
   R = 5%

   P x R x T = SI
   12,000 x 5 x T =shs.1800
   100
   600 T = 1800³
   600 600₁
   T = 3 years

2. How long will sh.48,000 take to yield sh.5400 at 15% per year?

   P = sh.48,000
   R = 15% per year
   SI = sh.5400
   P x R x T = SI
   Shs.48,000 x 15 x T = sh.5400
   100

   shs.480 x 15T =shs.5400
   shs.7200T = shs.5400
   shs.7200 shs.7200
   T = ¾ years

SUB TOPIC: More about simple interest

1. A man borrowed money in a bank which offers a rate of 10% p.a for 3 years. Calculate the sum of money he borrowed if he returned sh.26,000 after 3 years.

$$P + SI = AMOUNT$$
$$P + PRT = AMOUNT$$
$$P + P \times \frac{10}{100} \times 3 = sh.26,000$$
$$P + \frac{3P}{10} = sh.26,000$$
$$10 \times P + \frac{3P}{10} \times 10 = sh.26,000 \times 10$$
$$10P + 3P = sh.260,000$$
$$13P = sh.260,000$$
$$\frac{13P}{13} = \frac{sh.260,000}{13}$$
$$P = sh.20,000$$

Example 3

A teacher a wards 4 marks for every correct answer and deducts a mark for every wrong answer.

(a). If a pupils gets 12 correct answers in a test of 20 numbers, how many marks does he get ?

Correct answers = 12

Wrong answers = 20 -12

= 8

Marks scored = (12 x 4) – (8x1)

= 48 - 8

= 40 .

Mathematics is the Key

(b).If pupil gets 60 marks in a test of 30 questions, how wrong answers will he have got?

Let the wrong answers be m

Correct answers = 30 - m

4(30 - m)-(mx1) = 60

120 – 4m – m = 60

120 – 5m = 60

120 – 120 – 5m = 60 -120

-5m = - 60

$$\frac{-5m}{-5} = \frac{-60^{12}}{-5_1}$$

m = 12 wrong answers

2. Waswa spent $^1/_3$ of his money on books and $^1/_6$ of the remainder on transport and the rest as pocket money.

(i) What fraction of his money was left for pocket money?

Fraction spent on books = $^1/_3$

Remaining fraction: $1 - \frac{1}{3} = \frac{3}{3} - \frac{1}{3} = \frac{2}{3}$

Fraction spent on transport: $\frac{1}{6}$ *of* $\frac{2}{3} = \frac{1}{6} \times \frac{2}{3}$

$= \frac{1}{9}$

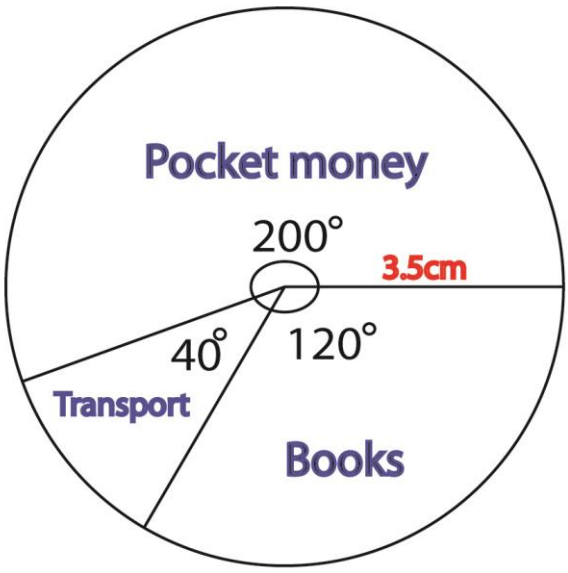

transport and books: $\frac{1}{3} + \frac{1}{9}$

$\frac{1}{3} \times \frac{3}{3} + \frac{1}{9} = \frac{3}{9} + \frac{1}{9} = \frac{4}{9}$

Remained fraction = $1 - \frac{4}{9} = \frac{9}{9} - \frac{4}{9} = \frac{5}{9}$

(ii) Using a radius of 4cm, construct a pie chart showing the information

Books	Transport	Pocket money
$\frac{1}{3} \times 360°$ $120°$	$\frac{1}{9} \times 360°$ $40°$	$\frac{5}{9} \times 360°$ $5 \times 40°$ $200°$

Average speed = $\frac{TDC}{TTT}$

Distance 1

$D = S \times T$

$= 60km/hr \times 3\frac{1}{2}hrs$

$= 60 \times \frac{7}{2}km$

$= 30 \times 7km$

$= 210km$

Distance 2

$D = S \times T$

$= 80km/hr \times 1\frac{1}{2}hrs$

$= 80 \times \frac{3}{2}km$

$= 40 \times 3km$

$= 120km$

$TDC = 210km + 120km = 330km$

$TTT = 1\frac{1}{2}hrs + 3\frac{1}{2}hrs = 5hrs$

Average speed = $\frac{330km}{5hrs}$

SUB TOPIC: Application of perimeter

(a) Poles in a straight line (Open fences)

In open fences, the number of poles is one more than the number of spaces

There are 11 poles and 10 spaces in the figure above

Number of poles = no. of spaces +1

No. of spaces = $\frac{distance}{interval}$

1. Electric poles are planted 20m apart. Find the distance from the first pole to the 10th pole.

No. of spaces = No of poles – 1

Distance = (10 – 1) X 20m

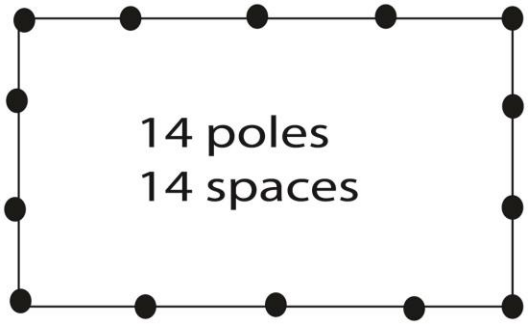

= 9 X 20m

= 180m

2. **Closed fences:**

In closed fences the number of poles corresponds with the number of spaces.

In the illustration below the number of poles is 14 and the number of spaces is also 14.

No. of poles = $\frac{perimeter}{interval}$

Example:

Mukasa's rectangular flower garden measures 10m by 8m. He fenced it, putting the poles 2m apart. How many poles did he need?

Perimeter of flower garden

P = 2(l + w)

= 2(10 + 8)m

= 2(18)

= 36m

No. of poles

= Perimeter

interval

= $\frac{36m^{18}}{2m}$

18 poles

SUBTOPIC: Packing cylinders in boxes

Tins of wood glue were packed in the box as shown below.

Mathematics Answer Key

(a) How many tins were packed in the box altogether?

Along the length

$\frac{63cm}{7cm} = 9\ tins$

Along the width

$\frac{49cm}{7cm} = 7tins$

Along the height

$\frac{40cm}{10cm} = 4\ tins$

No. of tins

$9 \times 7 \times 4 = 252\ tins$

(b) Calculate the volume of the space that was left after packing.

Volume of the box

$\boldsymbol{V = L \times W \times H}$

$\boldsymbol{= 63cm \times 49cm \times 40cm}$

$\boldsymbol{= 3087cm^2 \times 40cm}$

$\boldsymbol{= 123,480cm^3}$

Volume of 252 tins

$\boldsymbol{V = \pi r^2 h \times 252}$

$\boldsymbol{= \frac{22}{7} \times \frac{7cm}{2} \times \frac{7cm}{2} \times 10cm \times 252}$

$\boldsymbol{= 77cm^2 \times 5cm \times 252}$
