TOPIC 4: PATTERNS AND SEQUENCES

LESSON 1:

SUB TOPIC: DIVISIBILITY TESTS

CONTENT: Divisibility tests of 2, 3, 4 and 5.

Divisibility for 2.

A Number is divisible by 2 if the digit in the one's place is 0, 2, 4, 6, or 8 eg 1460

Test for 3:

A number is divisible by 3 if the sum of its digits is divisible by 3 eg 741 = 7 + 4 + 1 = 12

Test for 4:

A number is divisible by 4 if the number formed by its last two digits is divisible by 4. eg 572. The last two digits are 7 and 2 therefore the number formed is 72 which is divisible by 4. Hence 572 is divisible by 4.

Test for five (5):

A number is divisible by 5 if the last digit in the ones place is either 0 or 5. eg 360 or 805.

LESSON 2:

SUB TOPIC: DIVISIBILITY TESTS

CONTENT: Divisibility tests for numbers 6 to 10.

Test for 6:

A number is divisible by 6 if it is divisible by 2 and 3. In other words a number is divisible by 6 if it is even and the sum of its digits is divisible by 3.

Example:

618 is divisible by 6 since it is an even number and the sum of its digits 6 + 1 + 8 = 15 is divisible by 3.

738 is divisible by 6 since it is an even number and the sum of its digits 7 + 3 + 8 = 18 is divisible by 3. Therefore 738 is divisible by 6.

Test for 7:

When the last digit of a number is doubled and the result is subtracted from the number formed by the remaining digits, the outcome is divisible by 7.

Example: Take the number 861. the last digit is 1 and the number formed by the remaining digits is 86, double 1 to give (1+1)= 2

Subtract 2 from 86 to give (86 – 2) = 84

84 is divisible by 7. Hence 861 is also divisible by 7.

Test for 8:

A number is divisible by 8 if the number formed by the last three digits is divisible by 8.

Example:

In the number 7960,760 is number formed by the last three digits. It is divisible by 8 therefore 7960 is divisible by 8.

Test for 9:

A numbers is divisible by 9 if the sum of its digits is divisible by 9.

Example: 198 the sum of 198 is 1+9+8 = 18

18 is divisible by 9 therefore 198 is divisible by 9.

Test for 10:

A number is divisible by 10 if the digit in the ones place is 0 eg 70, 60, 120, 3010.

A number which is divisible by 10 is also divisible by 2 and 5.

Test for 11:

A number is divisble by 11 if the difference between the sum of the digits in even places and the sum of the digits in the odd place is zero (0) or divisible by 11.

eg Even position: 7 3 3 6 8 9

Odd position

Sum of the numbers in odd positions = 7 + 3 + 8 = 18

Sum of the numbers in even positions = 7 + 3 + 0 = 10

Difference between sums = 21 – 10 = 11

Since difference is divisible by 11

∴ the number 676390 is divisible by 11.

(i) What fraction of his money was left?

Fraction spent on books 1/3

Remained fraction: $1 - {}^1/_3 = \frac{3}{3} - \frac{1}{3} = \frac{2}{3}$

Fraction spent on transport: $\frac{1}{6}$ of $\frac{2}{3} = \frac{1}{6} \times \frac{2}{3}$

Total fraction spent on transport and books: $1 + 1$

$\frac{3}{3} \quad \frac{9}{9}$

$\frac{3+1}{9} = \frac{4}{9}$

Example: A basket has 2 ripe mangoes and 6 row mangoes. What is the probability of Twaha picking a ripe mango at random?

Solution: Total number of events is picking whatever is in the basket, whether ripe or not. So the number of chances is raw + ripe. Then the desired chance are the ripe mango.

Probability: Desired chance / Total chance $= \frac{2}{2+6} = \frac{2 \div 2}{8 \div 2} = \frac{1}{4}$

   Each additional word 50gram shs 30.
2. Printed papers: For the first 50 grams shs 50
   Each additional 50 grams shs 20

(a) How much does it cost to post a letter weighing 120 gram?
First 20 grams = shs 50
Additional grams = 120 – 20
100
Additional 20 grams = $\frac{100}{20}$
= 5 additional 20 grams
= 5 x 30 = 150
= 150 + 50
= 200

(b) How much does it cost shs 2000 to post 2 letters each weighing 120 grams and 2 printed papers each weighing 300grams?
Letters
1 letters weighing 120g – 20g = shs 50
Additional grams = 120 – 20
= 100g
Additional 20 grams = 100
20
= 5

1 letter = 50 + 150
= 200
2 letters = 200 x 2
= 400
Printed papers:
First 50g = sh 50
Additional grams = (300 – 5)

SUB TOPIC: VALUE ADDED TAX (VAT)

CONTENT: VAT is a tax paid by a customer when he pays for a service or buys a commodity.

Example:
A retail trader bought a bicycle from a whole sale at 120,000= including VAT if the VAT was 20%.
(a) Find the VAT in the cost price.
VAT Value = R x cost price where R is VAT rate

$$= \frac{20 \times 120{,}000}{1000 + R}$$

$$= \frac{20 \times 120{,}000}{100 + 20}$$

$$= \frac{20 \times 120{,}000}{120}$$

= 20 x 1000
= 20,000=

What was the cost price before the VAT?
Cost price before VAT = Cost price – VAT value
= 120,000 – 20,000=
= 100,000=

Example 2:
A trader buys a radio from a whole sale at 60,000 and the VAT rate is 20% if the trader adds 10% profit on the cost price, find:

Example:

Mukasa's rectangular flower garden measures 10m by 8m. He fenced it, putting the poles 2m apart. How many poles did he need?

Solution:

Perimeter of flower garden

CONTENT: Finding the perimeter of shapes using pi (π)

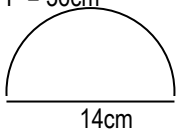

Examples:

$P = \frac{1}{2} \pi D + D$

$= \frac{1}{2} \times 22 \times 14 \times 14$

$= 22 + 14$

$P = 36cm$

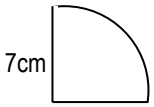

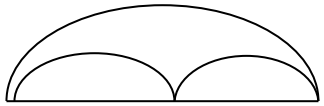

$P = \frac{1}{4} 2\pi R + R + R$

$= \frac{1}{4} \times 2 \times 22 \times 7 + (7 + \&)$

$= 11 + 14$

$P = 25cm$

Diameter of big semicircle = 28cm

Circumference of big semicircle

$= \frac{1}{2} D = \frac{1}{2} \times \frac{22}{7} \times 28$

$= 22 \times 2$

$= 44cm$

Diameter of each small semicircle = 14cm

Circumference of one semicircle = $\frac{1}{2} D$

$= \frac{1}{2} \times \frac{22}{7} \times 14$

$= 22cm$

Perimeter of the figure = 22cm + 22cm + 44cm

= 44cm + 44cm

Examples:

1. How many revolutions can a wheel of a car 35cm in diameter make in a distance of 4.4km?

$C = \pi D = \frac{22}{7} \times 35$

$= 22 \times 5$

$= 110cm$

$1km = 100{,}000cm$

$4.4km = 44 \times 100000$

$\frac{10}{}$

44×10000

$= 440000cm$

1 revolution = 110cm

No of revolutions = $\frac{440000}{110}$

2. A wire of length 352ms is wound round a tin 400 turns. Find the diameter of the tin.

$1m = 100cm$

$352m = 352 \times 100$

$= 35200cm$

1 revolution = $\frac{352000}{400}$

$= 88cm$

$C = \pi D$

$\frac{22D}{7} = 88cm$

$7 \times \frac{22D}{22} = 88 \times \frac{7}{7}$
