TERM THREE
2025**

Turn over

Item 1

Scenario

A farmer in Mbale has noticed increasing soil erosion on her sloping land, especially during the rainy season. Her yields have reduced significantly, and she's worried about long-term productivity. She seeks advice from extension workers on sustainable solutions.

Task

As an agricultural student, recommend appropriate soil and water conservation practices that the farmer can apply to improve her land's productivity.

Item 2

Scenario

A youth farming group in Lira grows large amounts of tomatoes, but often sells them at very low prices due to oversupply and lack of storage. They want to increase income through value addition but are unsure where to start.

Task

As an agribusiness advisor, suggest a value addition strategy the group can adopt to improve tomato marketing and reduce post-harvest losses.
